

CKGSB BCI

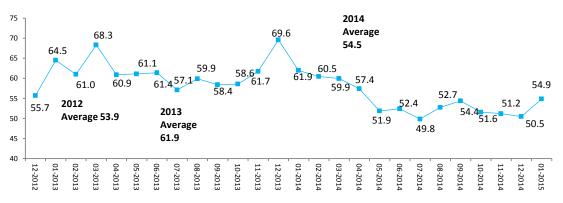

January 2015

25 January 2015

CKGSB Case Center and Center for Economic Research

In January 2015, the CKGSB Business Conditions Index (BCI) registered 54.9, slightly higher than December's index of 50.5 (Figure 1). Above the confidence threshold of 50, this means that the majority of relatively successful firms in China have a positive outlook on business in the upcoming six month period. However, given the downward trend that spanned the second half of 2014, China's macroeconomic risks remain on the horizon, and January's positive shift should be treated with caution.

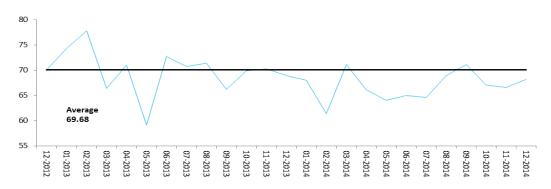

Figure 1 CKGSB BCI

The BCI is generated wholly on the basis of statistics gathered from leading enterprises whose executives have studied or are studying at Cheung Kong Graduate School of Business. In the questionnaire we ask respondents to indicate whether their firm is more, the same, or less, competitive that the industry average (50), and from this we derive a sample competitiveness index (Figure 2). Consequently, as our sample firms are in a relatively strong competitive position in their respective industries, the CKGSB BCI indices are higher than government and industry PMI indices. Users of the CKGSB BCI index may therefore focus on data changes over time to forecast trends in the Chinese economy.

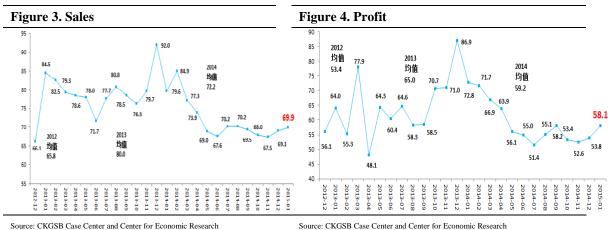

Graph 2 Industry Competitiveness

The CKGSB BCI comprises four sub-indices that are forwarding-looking indicators for corporate sales, corporate profits, corporate financing environment, and inventory levels.

Source: CKGSB Case Center and Center for Economic Research

Source: CKGSB Case Center and Center for Economic Research

The corporate sales index registered 69.9 in January and the profit index registered 58.1 (Figure 4). These are both up on last month's indices and higher than the confidence threshold of 50. Companies view the upcoming six months in a positive light, both in terms of sales and profit, given these statistics.

The corporate financing environment index increased very slightly from 41.4 in December to 41.7 in January, (Figure 5). With confidence levels below the threshold of 50, this indicates that compared with the same period last year, the financing outlook for the next six months is not good. Since the majority of our sample consists of private firms, this data show that firms in the private sector face particularly challenging financing pressures.

The index measuring inventory levels registered 47.1 in January, which is higher than last month's index of 37.6 but still under the confidence threshold (Figure 6). Inventory levels are expected to continue to be an issue in the upcoming period.

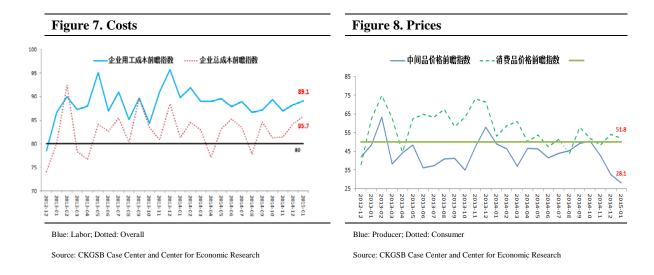

Besides the main indices, we also surveyed respondents on forecasted costs, prices, investment plans and employment conditions, to form a supplementary set of indices.

In January, labor costs and overall costs registered indices of 89.1 and 85.7 respectively (Figure 7), both at a high level. These two indices are predictions of changes to costs in the upcoming six months, and show that

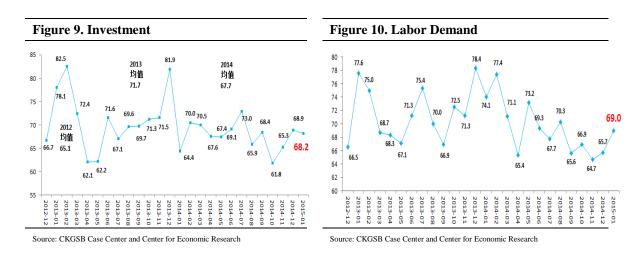

most sampled firms expect costs to increase compared with this time last year.

The consumer prices index registered 51.8 in January, down from 53.9 in December (Figure 8). From the past two months' figures, it appears that deflationary risks have been mitigated by government efforts to cut rates and release liquidity. Producer prices registered 28.1, far below the confidence threshold and the third significant fall in a row (November: 42.6, December: 32.5). As shown by these figures, industry conditions are far from optimal.

The corporate investment demand index fell slightly from 68.9 in December to 68.2 in January (Figure 9), above the confidence threshold of 50. This index shows that the majority of sampled firms intend to invest in fixed assets in the next six months.

In terms of labor demand, the January index shows 69 (Figure 10), higher than December's index of 65.7 and above the confidence threshold. This shows that a majority of companies sampled aims to expand their workforce in the next six months, showing belief in future growth. Corporate investment and labor demand indices are important factors in production output. From these two indices, we can see that companies have clear intentions to invest and to hire new staff. This shows a continued confidence in expanding production in the near future.

Overall, the CKGSB BCI has rebounded somewhat in January, but macroeconomic risks are still present. For private companies and SMEs, financing, inventory and costs remain the major operational challenges. The

central bank's loosening of interest rates is reducing financing pressures and the risk of deflation, and having a positive impact on the real economy. At the company level however, the situation should be leveraged to bring into play greater efficiencies in production and consumer service transformation. Investments should be considered very carefully, and timely responses to the government's continued implementation of economic reforms should be planned for.

CKGSB BCI Introduction

In June 2011, CKGSB Case Center and Center for Economic Research initiated a project to gauge the business sentiment of executives about the macro-economic environment in China – called an index of business conditions.

Under the direction of Professor Li Wei, in July 2011, the two research centers designed and tested the BCI survey. In September 2011, the first surveys were distributed and results computed. Since May 2012, the research team has published monthly BCI survey reports.

Explanation of the Index

The CKGSB Business Conditions Index (CKBCI) is a set of forward-looking, diffusion indices. The index takes 50 as its threshold, so an index value above 50 means that the variable that the index measures is expected to increase, while an index value below 50 means that the variable is expected to fall. The CKGSB BCI thus uses the same methodology as the PMI index.

The survey asks senior executives of companies whether their main products are for consumers or non-consumers, and then asks how they think product prices will change in the next six months. Based on survey responses, we have been able to report expectant changes in consumer and producer prices.

We ask companies for information pertaining to their relative competitive positions in their respective industries. Based on survey responses, we compute a competitiveness index for our sample. The higher the competitiveness index, the more competitive our sample firms are in their respective industries.

Method of Calculation

During each survey, respondents are asked to indicate whether certain aspects of their business (e.g., sales) are expected to increase, remain unchanged, or decrease over the forthcoming six months as compared to the same time period last year. The diffusion index is calculated by summing the percentage of "increase" responses and half of the "remain unchanged" responses.

Of all the indices measured for the CKGSB BCI, the overall business conditions index is an aggregate index, which has been calculated, since December 2012, by averaging its four constituent indices of sales, profit, financing environment and inventory. The aggregate BCI index before December 2012 uses a different composition of constituent indices, and is therefore not directly comparable to the current BCI index.

About Cheung Kong Graduate School of Business

Established in Beijing in November, 2002 with generous support from the Li Ka Shing Foundation, CKGSB is a private, non-profit, independent educational institution and the only business school in China with faculty governance. The school offers innovative MBA, Finance MBA, Executive MBA and Executive Education programs. In addition to its main campus in the center of Beijing, it has campuses in Shanghai and Shenzhen and offices in Hong Kong, London and New York.

Thought Leaders on Business in China

CKGSB faculty, through their on-the-ground research and close relationships with leading domestic executives, provide global thought leadership on both the theory and the practical reality of real-life business in China. They consistently generate important insights into areas that are poorly understood outside of China, such as the globalization strategies of Chinese companies and competition and collaboration among state-owned enterprises, private businesses and multinationals.

World-Class Faculty with a Global Perspective

CKGSB is the only business school in China with the reputation and resources to attract faculty from top business schools such as Wharton, Stanford, NYU, and INSEAD. The majority of CKGSB faculty members were born and raised in China before leaving to study and teach abroad. Their bicultural backgrounds have endowed them with a valuable capacity to interpret global business in the context of both China and the West.
